* Certain cells are blank because there are no nationwide polcies with that benefit period, issue age and inflation combination

For GPO policies with multiple layers of coverage, the Shared Cost percentage will be based on the issue age of the base contract. Each GPO layer will be reduced by the Shared Cost percentage

**Shared Cost Percentages**

### Note on premium calculation for a policyholder who elects the Shared Cost option:

To calculate the premium after election of the Shared Cost option, the premium rate schedules in Appendix C should be used. Since the Shared Cost option reduces the daily benefit, an additional factor is required to calculate the premium appropriately, as shown below:

$$\text{Premium after electing Shared Cost option} = \frac{\text{(Premium Rate Schedule per \$10 daily benefit: Appendix C)} * \text{(New Daily Benefit/10)}}{\text{(1 – Shared Cost Percentage)}}$$

A similar formula can be used for GPO policies with multiple layers of coverage:

$$\text{Premium after electing Shared Cost option} = \frac{[\ \text{(Premium Rate Schedule, Base Issue Age per \$10 Daily Benefit: Appendix C)} * \text{(New Base Daily Benefit/10)} + \text{(Premium Rate Schedule, GPO Layer 1 Issue Age per \$10 Daily Benefit: Appendix C)} * \text{(New Layer 1 Daily Benefit/10)} + \ \ldots\ ]}{\text{(1 – Shared Cost Percentage)}}$$

* Certain cells are blank because there are no nationwide polcies with that benefit period, issue age and inflation combination

For GPO policies with multiple layers of coverage, the Shared Cost percentage will be based on the issue age of the base contract. Each GPO layer will be reduced by the Shared Cost percentage

## Appendix D

**6060-6073 (Including 4062-NY & 4063-NY)**
**Shared Cost Percentages**

### Note on premium calculation for a policyholder who elects the Shared Cost option:

To calculate the premium after election of the Shared Cost option, the premium rate schedules in Appendix C should be used. Since the Shared Cost option reduces the daily benefit, an additional factor is required to calculate the premium appropriately, as shown below:

$$\text{Premium after electing Shared Cost option} = \frac{\text{(Premium Rate Schedule per \$10 daily benefit: Appendix C)} * \text{(New Daily Benefit/10)}}{\text{(1 – Shared Cost Percentage)}}$$

A similar formula can be used for GPO policies with multiple layers of coverage:

$$\text{Premium after electing Shared Cost option} = \frac{[\ \text{(Premium Rate Schedule, Base Issue Age per \$10 Daily Benefit: Appendix C)} * \text{(New Base Daily Benefit/10)} + \text{(Premium Rate Schedule, GPO Layer 1 Issue Age per \$10 Daily Benefit: Appendix C)} * \text{(New Layer 1 Daily Benefit/10)} + \ \ldots\ ]}{\text{(1 – Shared Cost Percentage)}}$$

## 2. Benefit Description(s)

A brief policy description for each of the policy forms:

6060-VA
Individually underwritten long-term care policies that provide facility-only long-term care coverage for care received in a nursing home or assisted care living facility.

Provides reimbursement of 100% of covered long-term care expenses incurred after an elected elimination period is met, up to the maximum daily amount. For care received in an assisted living facility, the maximum daily amount is 80% or 100% of the nursing home maximum daily amount, as elected at issue.

The benefit eligibility is determined based on the insured's cognitive impairment or their requiring physical assistance to perform two out of six activities of daily living (ADLs) of bathing, dressing, eating, toileting, transferring and maintaining continence.

Premiums are waived after the insured has met the elimination period and is receiving benefits and will continue to be waived until the insured stops receiving such benefits. Premiums are permanently waived after 120 consecutive days in a nursing facility.

For care received in an assisted living facility, the maximum daily amount is 80% of the nursing home maximum daily amount. For care received in a community setting, the maximum daily amount is 50% or 80% of the nursing home maximum daily amount, as elected at issue.

The benefit eligibility is determined based on the insured's cognitive impairment or their requiring physical assistance to perform two out of six activities of daily living (ADLs) of bathing, dressing, eating, toileting, transferring and maintaining continence. For the non-tax-qualified form 6072, the benefit trigger includes personal assistance due to illness or injury for facility care.

Individually underwritten long-term care policies that provide comprehensive long-term care coverage for care received in a nursing home or assisted care living facility or covered services received in a community setting.

Provides reimbursement of 100% of covered long-term care expenses incurred after an elected elimination period is met, up to the maximum daily amount. For care received in a community setting, the maximum daily amount is 80% or 100% of the nursing home maximum daily amount, as elected at issue. These forms also include restoration of benefits, and a survivorship benefit.

The benefit eligibility is determined based on the insured's cognitive impairment or their requiring physical assistance to perform two out of six activities of daily living (ADLs) of bathing, dressing, eating, toileting, transferring and maintaining continence. For the non-tax-qualified form 6073, the benefit trigger includes personal assistance due to illness or injury for facility care.

Premiums are waived after the insured has met the elimination period and is receiving benefits and will continue to be waived until the insured stops receiving such benefits. Premiums are permanently waived after 120 consecutive days in a nursing facility.

All forms include riders offering the insured an option to purchase Automatic Inflation Coverage of 5% on a Simple Inflation or Compounded Inflation basis.

## 3. Renewability

All policy forms are guaranteed renewable.

## 4. Applicability

This filing is applicable to in force policies only, as these policy forms are no longer being sold in the market. The premium changes will apply to the base forms as well as all applicable riders.

## 5. Actuarial Assumptions

Morbidity

The morbidity assumptions are derived from John Hancock's analysis of combined Time II and Union Security experience, following our most recent comprehensive claim study completed in 2016. The study has been peer reviewed both internally as well as by an Independent third party.

Our claims projections include 12 years of future morbidity improvements at 1.1% per year.

Below are currently expected sample annual claim costs for a 6062 policy, 80% HHC, single life, standard risk class, $10 daily benefit, with no inflation protection:

Mortality

The mortality rates have been derived from John Hancock's analysis of combined Time II and Union Security experience.

The base mortality table is the unloaded 1994 Group Annuity Mortality Table, sex-distinct, with 22 years of historical improvements based on scale AA. We then apply the following series of adjustment factors (factors for ages not listed above are interpolated):

We are also projecting 12 years of future mortality improvement based on scale AA, consistent with the 12 years of future morbidity improvement in our future claim projections.

Expenses

Expenses have not been explicitly projected. It is assumed that the originally filed expense assumptions remain appropriate.

## 6. Trend Assumptions

As this is not medical insurance, we have not included any explicit medical cost trends in the projections.

## 7. Marketing Method

This product was typically marketed through general agencies, brokers, and wholesale arrangements.

## 8. Underwriting

These policy forms were underwritten using a medical and risk questionnaire. We also utilized Attending Physician Statement and personal interviews depending on the age of the applicant and medical conditions.

## 9. Premium Classes

The base policy premium rates vary by issue age, benefit period, inflation option, home health care maximum benefit percentage, and underwriting class, as in the initial rate filing.

All premium factors related to the insured elected benefit design options or any eligible discount remain unchanged from the initial rate filing.

## 10. Premium Modalization Rules

| Frequency | Multiple of Annual Premium |
|---|---|
| Semiannual | 0.51 |
| Quarterly | 0.26 |
| Monthly | 0.088 |

## 11. Issue Age Range

The issue age range is 18-84 for all policy forms.

## 12. Area Factors

Area factors are not applicable to any of the policy forms or riders.

## 13. Average Annual Premium

The table below summarizes the average annual premium per premium-paying policy before and after the requested increase.

## 14. Number of Policyholders

The table below summarizes, as of 12/31/2018, the number of premium-paying policies inforce and their 2018 annualized premium that will be affected by this rate increase in your state.

| Form | Number of Policies | Annualized Premium |
|---|---|---|
| 6060-VA | 50 | 75,776 |
| 6062-VA | 54 | 106,928 |

## 15. Reserves

Active Life Reserves have not been used in this rate increase demonstration. Minimum Statutory Claim reserves as of 12/31/2017 have been discounted to the date of incurral of each respective claim and included in the historical incurred claims. Incurred But Not Reported claim reserves as of 12/31/2017 have also been allocated to the calendar year of incurral and included in historic incurred claims.

## 16. Analysis Performed

The initial premium schedule was based on the originally filed pricing assumptions which were believed to be appropriate, given company and industry experience available, when the initial rate schedule was developed.

The original pricing assumptions for morbidity, voluntary termination rates, and mortality were as follows:

Morbidity

Confinement length and incidence rates were based on unpublished industry data and the 1985 National Nursing Home Survey as reported in the Society of Actuaries Transactions, 1988-89-90 Reports. These were adjusted for the differences between the populations of the data sources and the anticipated underwritten insured population.

The length of non-confinement benefits and incidence rates were based on data from the 1984 and 1989 Long Term Care Surveys, adjusted for the differences between the populations of the survey and the anticipated underwritten insured population.

Below are original pricing discounted annual claim costs for a 6062 policy, 80% HHC, 90 day EP, $10 daily benefit, standard risk class, single, with no inflation protection:

Voluntary Terminations

These original pricing rates were determined by considering the combined effects of mortality and lapsation using limited company and industry data. Original pricing termination rates were set to vary by issue age and duration such that about 89% of policies persist after the first policy year, and that persistency rates are fairly constant each year thereafter. To meet these criteria, voluntary lapse rates were set at about 8% in year one, grading down to about 3% ultimately, varying somewhat by issue age.

Mortality

Based on limited industry data, the 1975-80 Basic Mortality Table was used, blended to reflect the anticipated distribution of sales by sex, which was 60% female and 40% male. Also, selection factors of 0.50, 0.80, and 1.00 were applied in durations 1, 2, and 3+.

**Recent Experience**

As part of the inforce management of the business, the Company monitors the performance of the business by completing periodic analysis for morbidity, voluntary lapse rates and mortality. The findings from these analyses were used in projecting the inforce business to determine the effect of experience on the projected lifetime loss ratio. The most current studies show significant unfavorable trends since the study that prompted our 2013 rate increase filings. In general claims, particularly at higher ages, continue to last longer than expected, lapses are lower than expected, and a higher percentage of claim terminations are due to recoveries (as opposed to death) than expected.

The following tables show in aggregate how our new assumptions (Expected) compare to actual experience, where actual experience includes all Time Insurance II and Union Security data:

## 17. Requested Rate Increase

The Company is requesting a rate increase of 42.3%, which reflects a cap on our originally proposed rate increase of 155.0%, as requested by the state. Rate increases were derived as follows:

1. The Company first determined the projected lifetime loss ratio for this form based on nationwide actual experience and projected future experience assuming all prior rate increase requests were approved in full and within three months of the original filing date. In 2013 we certified to a lifetime loss ratio of 93.7% using nationwide data for the 4060s and 6060s policy series. For the 2016 Rate Filing, we are not combining data and are determining rate increases for Time Insurance II and Union Security Insurance separately. As such, we have restated the 2013 certified loss ratios and the new target loss ratio for Union Security Insurance is 91.3%. We then determined the amount of rate increase (29.5%) that would be needed in order to revert to the restated lifetime loss ratio certified to in the 2013 inforce rate increase filing for this form.
2. We ensured that the proposed rate increases did not result in premium rates that exceed rates for older issue ages or the most recent traditional LTC rates that have been filed with the Interstate Compact for new business under the ICC12-LTC-12 policy form, adjusted for benefit differences and changes in underwriting guidelines and risk classification (this is demonstrated in **Appendix A** using 6062 as an example). As this product (ICC12-LTC-12) is no longer open for new business, the most recently filed new business LTC rates for this product were adjusted to account for the average impact of the assumption updates due to the 2016 Experience Studies. An adjustment of 9.5% was applied to all rates to reflect these updates. Additionally, we limited the rate increase to the amount calculated in Step #1 and graded from the maximum allowed rate increase at issue age 70 to 9.5% by issue age 80 and above. After the application of these restrictions, we are unable to achieve our target loss ratio, and therefore will target 94.1%. Targeting this loss ratio, the average rate increase for the forms listed in this memo is 16.6%, ranging from 8.8% to 29.5%.
3. Unapproved rate increases initially requested in our 2013 inforce rate filings (SERFF Tracking No. MULF-129573228) were included in this filing. Your State did not approve these rate increases. These rate increases continue to be actuarially justified and are unchanged from our original request with the following exception: to account for the delayed implementation of the originally-requested rate increases, we have adjusted the portion of the current proposed rate increases attributable to the 2013 request so that on a present-value basis it is equivalent to implementing our original request all at once After taking the

unapproved amount into account and applying this adjustment, the average rate increase for the forms listed in this memo is 155.0%, ranging from 42.5% to 251.5%.

4. We ensured that the resulting overall increase in rates satisfied the rate stability rule ensuring no less than an 85% loss ratio on the rate increase portion, while applying the original loss ratio on the original rate schedule (as the original loss ratio was higher than 58%). This is demonstrated at the bottom of **Exhibit 1** where it can be seen that the sum of past and future projected incurred claims is not less than the sum of the original premium times the original loss ratio and the rate increase premium times the 85% loss ratio requirement.
5. Per the state's request, the rate increase was then capped at 42.3%. This amount was based on the Prospective Present Value Approach without reflecting the Catch-Up Provision. We would expect to file for additional rate increases to attain the target Lifetime Loss Ratio. This rate increase will be applied as a flat rate increase, as our original request exceeds 42.3% for all impacted Virginia policyholders.

Note that in **Appendix A** we reflect the proposed premium rates both with and without any additional cost as we believe any cost due to delayed implementation should not be subject to the new business rate restrictions.

**Appendix B1** contains the new proposed rate tables for all policy forms included with this filing for those policyholders that *did not* elect an inflation reduction option as part of the 2010 rate increase filing.

**Appendix B2** contains the new proposed rate tables for all policy forms included with this filing for those policyholders that *did* elect an inflation reduction option as part of the 2010 rate increase filing.

Please note that the actual rates implemented may vary slightly from those in Appendices B1 to B2 due to implementation rounding algorithms.

**Exhibit 1** contains nationwide past premium and claims experience as well as future premium and claim projections. It illustrates that the anticipated lifetime loss ratio with the originally requested rate increase is 94.1% (which is higher than the target loss ratio due to new business rate cap restrictions), and the anticipated lifetime loss ratio with the capped rate increase is 115.5%. Both loss ratios are well in excess of the minimum loss ratio of 60% as well as greater than the original pricing loss ratio of 71.1%. The lifetime loss ratio as of 12/31/2017 is calculated as the sum of accumulated past and discounted future claims divided by the sum of accumulated past and discounted future earned premium where accumulation and discounting occur at the maximum statutory valuation discount rate.

**Exhibit 1** also contains the original expected loss ratio projections, adjusted for the actual mix of business issued, with the lifetime loss ratio also calculated as stated above.

Furthermore, **Exhibit 1** demonstrates that the sum of the accumulated value of incurred claims without the inclusion of active life reserves, and the present value of future projected incurred claims, without the inclusion of active life reserves, will not be less than the sum of the following:

1. Accumulated value of the initial earned premium times the original assumed lifetime loss ratio (which was higher than 58%),
2. 85% of the accumulated value of prior premium rate schedule increases,
3. Present value of future projected initial earned premium times the original assumed lifetime loss ratio, and
4. 85% of the present value of future projected premium in excess of the projected initial earned premium.

Note that as shown at the bottom of **Exhibit 1B**, by requesting the current rate increase, we are complying with Virginia state regulation, where the post rate increase future loss ratio (adjusted for Net Level Premium Reserves) is no less than 60% under the original pricing interest rate assumption.

**Exhibit 2** contains the same past experience and future projections as Exhibit 1, except only for policies issued in Virginia. Please note that the experience alone is not credible and was not used to develop the proposed rate increase.

### 18. New Shared Cost option that will allow the policyholder to offset the rate increase

We are filing a new Shared Cost option that will allow all policyholders the option to offset the rate increase. The Shared Cost option would:

- Reduce the policyholder's current policy benefit amounts by their Shared Cost percentage. The daily/monthly benefit and the policy limit will be reduced by the Shared Cost percentage
- Apply a percentage factor to any future claim payments equal to the Shared Cost percentage. John Hancock will pay our portion (1 minus the Shared Cost percent) of any covered services, up to the new benefit amount and the policyholder will be responsible for the remainder.

The Shared Cost Percentages are calculated using seriatim, nationwide data for each benefit period, inflation type and issue age combination. For policyholder Shared Cost percentages and for details on premium calculations for policyholders who elected the Shared Cost option, please see **Appendix D**. The Shared Cost percentages in Appendix D will apply to all policyholders who have not bought additional attained age coverage. For those who have, the Shared Cost percentage will be the lesser of those shown in Appendix D and 80% of the policyholder's currently available benefit reduction that would offset their rate increase.

All Shared Cost percentages were determined to be actuarially equivalent to the requested rate increases by combination of issue age, benefit period and inflation type.

The premium rate schedules for these options are included in this filing as **Appendices C1 to C2.**

### 19. Additional option for those who stop paying premiums

In addition to the options to offset the rate increase, we will also be offering a Paid-Up Policy option for those who choose to stop paying premiums. This option will be a paid-up policy with a policy limit equal to the lesser of the current policy limit and 150% of premiums paid less any benefits received.

### 20. History of previous rate revisions

A 18.0% rate increase on these policy forms was accepted by your state on October 15, 2008.

A 45.3% rate increase on these policy forms was accepted by your state on August 08, 2013.

### 21. Ensuring No Cross-Subsidization Between States

We have ensured no state's rate increase approvals will subsidize other states' rate increases. Rate increases will vary by state, but only to reflect the timing and amount of prior rate increases approved by that state. This is accomplished by first backing-out all prior approved rate increases from our nationwide premium data. We then re-introduce actual prior rate increases with the amount and timing based on your state's prior approvals (as detailed in Section 20). The current proposed rate increases are then determined based on the amounts needed in order to achieve our target lifetime loss ratios certified to in our prior filing.

Although some states may have capped our previous inforce rate increase filings, in each case this was done with the understanding that the full amount of the proposed rate increases were justified and that John Hancock would be refiling for the remainder at a later date. In instances where the remainder remains unapproved, it has been included in the current filings.

## 22. Past Losses Testing

Preventing companies from recouping past losses was the subject of a discussion by the NAIC in late 2013. The accepted methodology which was incorporated into the 2014 Long Term Care Model Regulation defines past losses as actual past claims less expected past claims when determining loss ratio compliance. Expected past claims are defined as the following:

> "Expected claims shall be calculated based on the original filing assumptions assumed until new assumptions are filed as part of a rate increase. New assumptions shall be used for all periods beyond each requested effective date of a rate increase [regardless of whether or not the rate increase is approved]. Expected claims are calculated for each calendar year based on the in-force at the beginning of the calendar year. Expected claims shall include margins for moderately adverse experience; either amounts included in the claims that were used to determine the lifetime loss ratio consistent with the original filing or as modified in any rate increase filing."

We apply this methodology in **Exhibit 1A**. The 'Adjusted Expected Incurred Claims' are initially calculated by applying the original pricing durational loss ratio to the actual earned premium in a given calendar year. Later, in years in which and after which we filed for inforce rate increases, expected incurred claims are based on the new assumptions that were filed.

The accumulated value of the Adjusted Expected Incurred Claims is compared to the accumulated value of Actual Incurred Claims. The lesser of the Adjusted Expected Incurred Claims or Actual Incurred Claims is used for past claims when ensuring that the resulting overall increase in rates satisfies the rate stability rule ensuring no less than an 85% loss ratio on the rate increase portion, while applying the original loss ratio on the original rate schedule (as the original loss ratio was higher than 58%). This is demonstrated at the bottom of **Exhibit 1A**.

## 23. Proposed Effective Date

These rates will be effective on the next policy anniversary date, following at least a 90 day policyholder notification period. The assumed effective date used to calculate the rate increase is 8/1/2017 as we do not want to charge policyholders for the company's delay in filing.

## 24. Actuarial Certification

I am a Fellow of the Society of Actuaries and a Member of the American Academy of Actuaries, and I meet the Academy's qualification standards for rendering this opinion and am familiar with the requirements for filing long-term care insurance premiums and filing for increases in long-term care insurance premiums. This memorandum has been prepared in conformity with all applicable Actuarial Standards of Practice, including ASOP No. 8.

I hereby certify that, to the best of my knowledge and judgement, this rate submission is in compliance with the applicable laws and regulations of the Commonwealth of Virginia and that the premiums are reasonable in relation to the benefits provided.

The preceding Actuarial Memorandum contains:

a) the assumptions on which this certification is based;
b) the adjustments to prior assumptions with an explanation of the reasons previous assumptions were not realized;
c) a lifetime projection of the prior premium rate schedules and incurred claims plus future expected premiums and claims which demonstrates that the revised premium rate schedule meets the loss ratios standards and necessary details of this state; and
d) disclosure of the manner, if any, in which reserves have been recognized.

The requested premium rate schedule is based on assumptions developed from our 2016 experience study. Due to the capped approval, additional rate increases will be necessary to achieve the full actuarially justified one-time request based on the Lifetime Loss Ratio and the assumptions developed from our 2016 experience study. We recently completed another experience study in 2019 which shows the need for additional rate increases. We will be addressing the need for both the remainder from this filing as well as the additional rate increases based upon the 2019 experience study in a future filing.

I have reviewed and taken into consideration the policy design and coverage provided, and our current underwriting and claims adjudication processes.

In forming my opinion, I have used actuarial assumptions and actuarial methods and such tests of the actuarial calculations as I considered necessary. Based on these assumptions or statutory requirements where necessary, the premium rate filing is in compliance with the loss ratio standards of this state.

The basis for contract reserves has been previously filed and there is no anticipation of any changes.

* 2008 and 2010 Rate Filings combined data for the 4060s and 6060s Policy Series. As it is difficult to separate data in older databases, we have approximated the 4060s and 6060s expected premiums and expected claims using 2013 Rate Filing ratios applied to the combined 4060s and 6060s premiums and claims

4062 HHC benefit is 80% of NH benefit, but ICC12-LTC-12 is 100% of NH
